

# HaiKom 3.0 - 2020.2 - What is new?

*The changes can be general (G) or apply to either MIS (M) or Web 2 Print (W)*

## General

- Inventory. Manage inventory restock. Add new quantity to stock, change weight per unit, stock location and shelf in a list view. (G)
- Today's date is highlighted in date selection for requested delivery date. (G)
- Added option to hide order dashboard for customers. (W)
- Added notification to the project manager when the customer uploads a print file after the order has been submitted. (G)

## Price calculation

- Specify if a price item is an incremental cost or a common cost. (M)
- Contribution margin information has been added to calculation (M)
- Weight per unit has been added to calculation gui. Weight per unit and total weight is shown in calculation document (M)

## Preflight profiles

- Preflight profiles. Configure preflight profiles on site level and choose if an error should stop the job or give a warning. You can also add a cost to correct a specific problem, for example when print file is missing bleed. (G)
- Rules can be added to preflight profiles so that the profile only checks the print file if a condition is met. An example is having different checks for image resolutions depending on the page size of the print file. (G)
