

# HaiKom 3.0 - 2020.3 - What is new?

The changes can be general (G) or apply to either MIS (M) or Web 2 Print (W)

## New price item structure

- Price items are now stored in categories that take the form of a directory structure similar to how templates are organized. Price items are selected from a directory tree when selected. (G)
- Categories can be created and edited manually or created when price items are imported. (G)

## Media bank

- Make it possible to upload a custom thumbnail for all media objects. (W)
- Performance improvements. (W)

## New information page

- The new information page allows you to add multiple sections containing either html or an image. Up to four sections can be displayed next to each other on each row. (W)
- Images can be selected from resources or the mediabank and support text that is displayed over the image and can link to a list of templates, a list of media objects, an information page or an external url. (W)
- The appearance of the image and the displayed text can be modified with custom inline CSS. (W)

## General

- Job calculation price handler: Make it possible to specify configuration in Application. (M)
- New sales report: Filter from - to date, sales person, statuses and see markup and contribution margin per order Totals for each sales person is summarized separately. (W)
- VDP JobImporter: Added support for reading address from Custom properties of PDF. (W)
- Standard order export: Added unit-cost-price and job summary. (G)
- Spreadsheet pricing: External price and cost price can be specified. (G)
- Freight prices: External price and cost price can be specified. (G)
- Custom price item properties can be administered in suppliers. (G)
